

Walmart Sales & Operations Dashboard Report

Project Overview

This project focuses on analyzing Walmart's retail sales and operational performance using an interactive Power BI dashboard. The analysis was performed using a star schema dataset containing sales, customers, products, employees, and geographic information.

The dashboard was designed to provide business insights across four major areas:

- Sales Performance
 - Product Analysis
 - Customer & Geographic Insights
 - Employee Performance
-

Objective of the Analysis

The main objective of this project was to:

- Identify high-performing products and categories
 - Analyze revenue and profit trends
 - Understand customer purchasing behavior
 - Evaluate employee productivity
 - Identify operational inefficiencies
 - Support data-driven business decisions
-

Dashboard Pages & Screenshot Placement

PAGE 1: SALES OVERVIEW

Analysis Performed

This page provides a high-level overview of Walmart's sales performance through KPIs and trend analysis.

KPIs Used:

- Total Revenue
- Total Profit
- Profit Margin %
- Total Orders
- Average Order Value

Visuals Used:

- Revenue Trend Line Chart
- Revenue by Region Donut Chart
- Revenue vs Profit by Category
- Orders by Category

Problems Identified

- Some categories generate high sales but lower profitability
- Revenue fluctuations observed over time

- Certain categories dominate order volume, creating dependency risk
-

Possible Reasons

- High operational or product costs
 - Uneven product pricing strategies
 - Seasonal demand fluctuations
 - Overdependence on a few product categories
-

Solutions Suggested

- Improve pricing strategies
 - Focus on high-margin products
 - Diversify category contribution
 - Optimize inventory allocation
-

Business Decisions That Can Be Taken

- Increase focus on profitable categories
 - Launch targeted category promotions
 - Improve sales forecasting
 - Monitor low-margin departments
-

PAGE 2: PRODUCT ANALYSIS

Analysis Performed

This page focuses on product-level performance and profitability analysis.

Visuals Used:

- Treemap
- Scatter Plot
- Top 10 Products Chart

Problems Identified

- Some products generate high revenue but low profit
- Product performance is uneven across categories
- Certain products have low contribution despite high inventory presence

Possible Reasons

- High procurement costs
- Inefficient pricing strategy
- Overstocking of low-demand products

- Weak product positioning

✓ Solutions Suggested

- Re-evaluate pricing for low-margin products
- Promote high-performing products
- Reduce inventory for low-demand products
- Improve product mix strategy

🎯 Business Decisions That Can Be Taken

- Increase investment in high-performing products
- Remove or redesign underperforming products
- Optimize inventory turnover
- Focus marketing on profitable categories

📄 PAGE 3: CUSTOMER & GEOGRAPHY INSIGHTS

Analysis Performed

This page analyzes customer behavior and geographic revenue distribution.

Visuals Used:

- Geographic Map
 - Customer Segment Distribution
 - Top Customers Analysis
 - Regional Performance Matrix
-

Problems Identified

- Revenue contribution varies significantly across regions
 - Heavy reliance on lower-tier customer segments
 - Customer concentration in specific geographic areas
-

Possible Reasons

- Uneven regional market penetration
 - Lack of premium customer engagement
 - Different purchasing behaviors across regions
-

Solutions Suggested

- Expand marketing in low-performing regions
 - Introduce loyalty programs
 - Improve customer retention strategies
 - Personalize customer engagement
-

Business Decisions That Can Be Taken

- Target high-potential regions
 - Improve customer segmentation
 - Increase focus on repeat customers
 - Develop region-specific marketing campaigns
-

PAGE 4: EMPLOYEE PERFORMANCE

Analysis Performed

This page evaluates employee productivity and operational performance.

Visuals Used:

- Employee Revenue Bar Chart
- Sales Target Gauge
- Employee Contribution Donut Chart
- Detailed Performance Table

Problems Identified

- Employee performance varies significantly
- Sales contribution is concentrated among a few employees
- Some employees handle lower order volumes

Possible Reasons

- Difference in experience and skills
 - Uneven workload distribution
 - Lack of performance tracking systems
-

Solutions Suggested

- Introduce employee performance benchmarking
 - Conduct sales training programs
 - Improve operational monitoring
 - Set department-level targets
-

Business Decisions That Can Be Taken

- Reward top performers
 - Provide additional support to low-performing employees
 - Improve workforce planning
 - Optimize employee allocation
-

Overall Business Insights

The dashboard highlights that Walmart maintains strong overall revenue and profitability while showing opportunities for improvement in product optimization, customer retention, and employee efficiency.

The analysis supports strategic decision-making by identifying:

- High-performing categories
 - Revenue-driving regions
 - Valuable customer segments
 - Operational strengths and weaknesses
-

Future Improvements

Future enhancements that can be added to the dashboard include:

- Sales forecasting
 - Customer churn prediction
 - AI-driven recommendations
 - Real-time reporting
 - Advanced drillthrough analytics
 - Predictive inventory management
-

Conclusion

This Power BI dashboard successfully transforms raw retail data into actionable business insights. The project demonstrates skills in:

- Data modeling
- DAX calculations
- Business intelligence
- Data visualization
- Dashboard storytelling
- Analytical decision-making

The dashboard enables Walmart to make more informed and data-driven strategic decisions across sales, products, customers, and operations.
